

Formal meeting 30/3

1. Objectives

- Plan and structure all required work, especially the domain model, as it needs to be done on Monday
- Use case diagram for RAD
- RAD is started, needs to be done
- Upload all documents on Github
- Review what we discussed on the mentor meeting
- How to create a LibGDX project
- Start coding, create a test
- We need some kind of runnable code for Thursday, with corresponding test (create testable classes in addition to the LibGDX-stuff?)
- The group should discuss the domain model
- Other?

2. Reports

- Sofia has cooperated with Robert on a flowchart, studied how to use LibGDX and Entity-Component-Systems, and created a LibGDX project on GitHub.
- Rasmus has worked on LibGDX setup and RAD.
- Robert has reworked the Git workflow to use Eclipse's Git tools, and worked on the flowchart.
- Arvid has worked on use cases and the domain model.

3. Further Discussion

- Discussions were held.
- Two weeks in and we're three weeks behind.

4. Outcomes

- The group will meet this Friday afternoon to work together.
- Arvid will take responsibility for working on the domain model and for making more use cases.
- Sofia will take responsibility for completing the use case diagram.
- Rasmus will take responsibility for filling in RAD with the information we have.
- Robert will take responsibility for setting up a document folder and uploading our documents to GitHub after every formal meeting.
- We are going to find help with using libgdx, ask friends, online tutorials, etc. so that we can start working with the implementation.

5. Wrap up

Next meeting will be held Monday 3/4 13:15.
